# TASK 2: Static Website Hosting
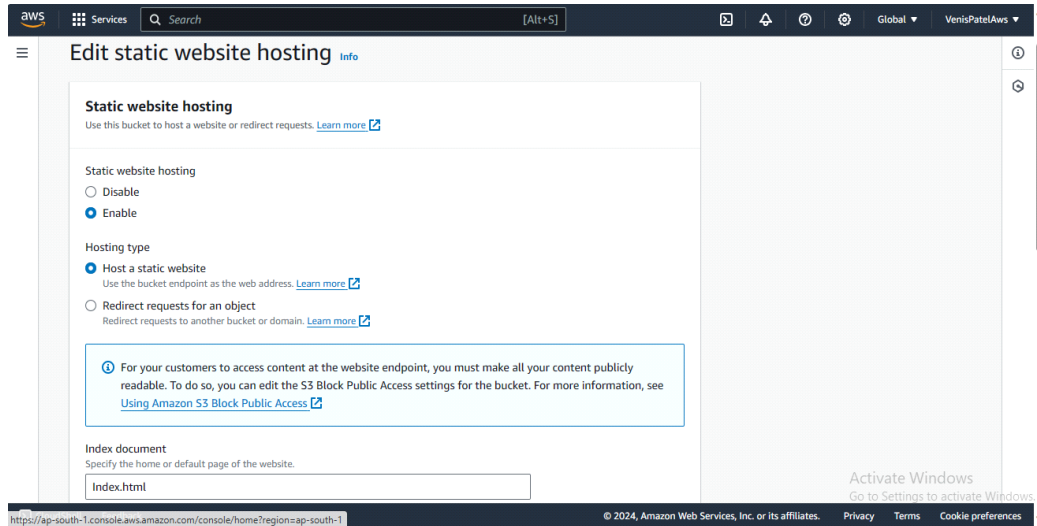

To statically host website:

- Click on upload in venisassignments3bucket. Then click on add file and select a static website in my case "Index.html" and click on Upload.

- Enable static hosting, this option is available in the properties of the bucket. Click on edit.
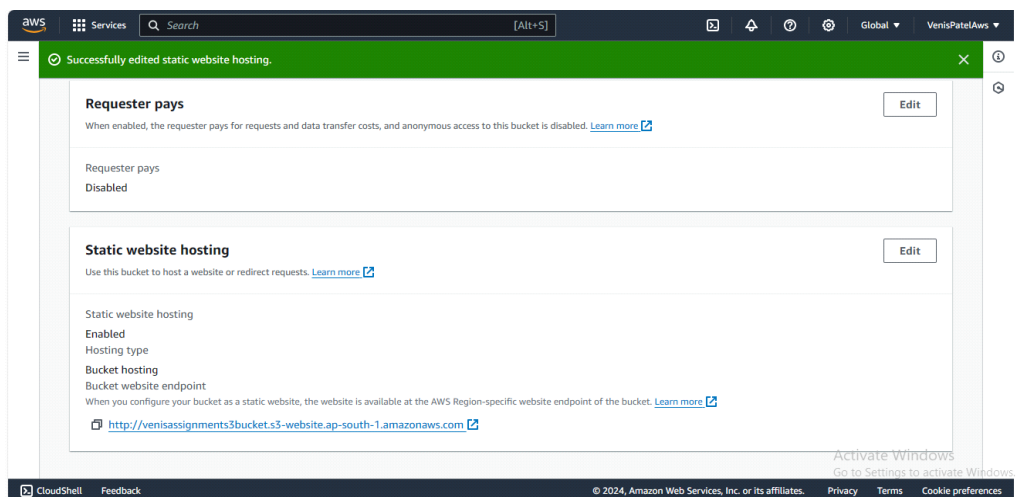

- Select enable in Static website hosting. Select hosting type as static. Enter name of the document as "index.html", Then click on save changes.

- Now you will be able to see the url in static website hosting tab inside properties.

  url: http://venisassignments3bucket.s3-website.ap-south-1.amazonaws.com/

Access the static website using the provided endpoint:
